

Name: JAN LEW CALUMPIANO
Course, Year & Section: BSIT 4-5

Student Number: 202301070
Date: September 17, 2026

ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

ITEC 111 – Personalized Linux & Git Cheat Sheet

1. Basic Linux Commands

Command	Sample usage	Purpose
pwd	pwd	Shows the current directory.
ls	ls -la	Lists files and folders.
cd	cd Documents	Moves to another directory.
mkdir	mkdir project	Creates a directory.
touch	touch file.txt	Creates an empty file.
cp	cp file.txt backup.txt	Copies a file.
mv	mv file.txt Documents/	Moves or renames a file.
rm	rm file.txt	Deletes a file.
cat	cat file.txt	Displays file contents.
clear	clear	Clears the terminal screen.

2. Basic Git Commands

Command	Sample usage	Description
git init	git init	Creates a Git repository in the current folder.
git restore	git restore file.txt	Restores a file to its previous state.
git status	git status	Shows modified, staged, and untracked files.
git branch	git branch feature	Creates a new branch.
git add	git add index.html	Stages changes for the next commit.
git checkout / git switch	git switch feature	Moves to another branch.
git commit	git commit -m "Initial commit"	Saves staged changes as a commit.
git merge	git merge feature	Combines another branch into the current one.
git log	git log --oneline	Shows previous commits.
git tag	git tag v1.0	Labels a specific commit, often for versions.
git diff	git diff	Shows unstaged changes.
git clone	git clone <repo-url>	Copies a remote repository to your computer.

Common Git Options / Flags

Flag / option	Use
-m	Adds a commit message.
-a	Stages modified/deleted tracked files when committing.
--oneline	Shows commits in compact form.
-b	Creates and switches to a branch with checkout.
-d	Deletes a branch.
--hard	Resets files and staging area to a selected commit.
--	Separates options from file paths.

3. Git Three-Tree Architecture

WORKING DIRECTORY Files currently being edited.	STAGING AREA (INDEX) Changes selected for the next commit.	REPOSITORY Committed snapshots and project history.
Edit files	git add	git commit

Flow: edit files → **git add** → staging area → **git commit** → repository
